

Engineering Your
Competitive Edge

**IN OIL, GAS AND
PETROCHEMICAL**

Engineered Product Solutions

Kennametal's Engineered Products Group works closely with our customer's engineering and development staff and with our own world-class Research and Development team on custom solutions for difficult problems that require rapid prototyping and short production lead times. Let our experts work with yours to prolong component life and improve performance in your operations. Kennametal produces a variety of custom made preformed and unfinished tools needed for the valve trim and flow control requirements of the oil, gas and petrochemical industries. Demanding applications require wear parts of exceptional performance. We offer our customers outstanding performance and value in everything we do. Our flexible manufacturing capability allows us to handle everything from the simplest, one-piece part orders to custom fabrication of the most complex shapes.

Applications

- Abrasive waterjet nozzles
- Industrial blast nozzles
- Flow control
 - Seal rings
 - Valves
- Polyolefin manufacturing
 - Bushings
 - LDPE hyper-compressor liners
 - Pelletizing die plates
 - LDPE hyper-compressor plungers
 - Pelletizing die plates – maintenance and service
 - Pelletizing knives

Kennametal is setting the standard in the oil, gas and petrochemical industries!

Let us prove it.
